Production data acquisition in production

About SIGMA

The SIGMA Chemnitz GmbH parent company is an experienced system house with over 80 employees at the Chemnitz and Dresden sites and has been offering a wide range of professional services in the fields of information technology, management and organization since 1990. The group of companies has had ERP experience since 1993.

SIGMA Software und Consulting GmbH has been maintaining an intensive partnership with SAP in the field of medium-sized business solutions since 2007.

All our consultants, developers and sales staff are certified by SAP and continuously undergo extensive training. We love SAP Business One!

„We are shaping digitization“

Whether start-up or medium-sized company - with SIGMA the project becomes a digital journey. SAP Business One is our basis and it's really great. The excitement rises with our mobile solutions for warehouse and production. It gets really good when we unpack our RFID solutions.

„We love SAP Business One“

Why? With SAP Business One, you can cost-effectively manage your entire business - from accounting and finance to purchasing, inventory management, sales, customer relationship management, project management, production, and human resources. Processes become simpler, insights into your business clearer, and you make the right decisions faster.

And we even do it better

We like end-to-end and digital processes. That is why we have developed the SIGMA PDA. Say goodbye to your production papers. Start with minimal hardware investment, as our SFDC solution can be operated on conventional PCs or even on simple Android tablets. Your employees can easily and quickly see which orders are pending at your machine, your workplace or in your team. In the production order itself, they will find all important information about the work sequences, the necessary raw materials as well as already accumulated and completed quantities. Of course, production time can be started, paused and completed with just one click. You have to consider serial numbers or batches? That's no problem with the SIGMA BDE. And so that you no longer have to print drawings, documentation, etc. in the future, your employees can call up all stored drawings, images and documents via the PDA terminal*. All captured data is immediately stored in SAP Business One. From now on, authorized SAP Business One users can follow the production progress in real time and are thus able to make statements without constant queries in production.

SIGMA PDA

- ✓ All important information about the production order
- ✓ browser-based solution / platform independent
- ✓ Easy access, stationary or mobile
- ✓ Low hardware investment
- ✓ Attachments such as pictures and descriptions can be called up directly
- ✓ All data is stored directly in SAP Business One
- ✓ Protection against unauthorised use (password or single sign-on)
